

Things that don't go bump in the night:  
why bats are the rock stars after dark

Revolution Cafe & Bar  
211 B South Main St.  
Downtown Bryan  
7-8 pm

Join us for a batty evening to learn about these mysterious creatures of the night! A quarter of all mammal species in the world are bats. They are incredibly diverse and have some amazing

adaptations, from suction cup fingers to tube noses. Bats are ecologically and economically important around the world, providing services such as seed dispersal, pollination, and insect control. Come

for a fun night to learn what vampires, tequila, and scorpions all have in common. Bring your questions and we will discuss the facts and fiction surrounding bats.

Science Café is free to everyone and meets the third Tuesday of every month
